FOOD SAFETY 

 BRAND PROTECTION

PRECISION IPM

Knowing when and where rodents are traveling, as well as their behavior patterns, are a part of the key of staying ahead of rodent problems at your business.

Gather rodent data by placing Express® iQ® trays in bait stations by exterior doors, which will illustrate entry points rodents are using to get inside your business, and at what time.

Anticipate problems before they arise based on information gathered by iQ® products.

EXPRESS iQ

PROFITABILITY PROTECTION

There are steep costs when rodents wreak havoc at your business, including:

- Recall expenses
- Shutdown expenses
- Audit failures
- Reputational cost

Keep mice away from product by placing 24/7® iQ® traps at all entry points and in out of sight areas such as underneath raw materials or finished goods pallets. Set T-Rex® iQ® traps in hard to reach locations where rats travel so you know when there is activity before getting a ladder.

24/7 iQ

T-Rex iQ

Instead of wasting time checking rodent devices with no activity, pest control experts can spend their time solving problems.
