YOUR 
REPUTATION

PROTECTING YOUR BUSINESS

Knowing why your facility is attractive to rodents is paramount to providing superior rodent control service and asset protection. Precise timestamps provide to the PMP and customer critical knowledge for the first time.

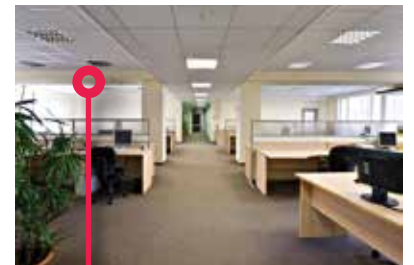

Placing Express® iQ® trays in bait stations by exterior doors provide the necessary information. Place 24/7® iQ® traps underneath areas where there is food, such as break rooms, to keep rodents away from your tenants, their businesses and employees.

CUSTOMER RETENTION

Keep your customers happy and your maintenance bills low by ensuring rodents aren't in your facilities.

Place 24/7® iQ® traps inside every entry door. Place T-Rex® iQ® traps in hard to reach locations, such as in dropped ceilings, as that is where rodents are traveling. Traps only need to be serviced if a rat is captured in the trap, cutting down on service time and business disruptions.

Instead of wasting time checking rodent devices with no activity, pest control experts can spend their time solving problems.
