PROTECTING VALUABLE INVENTORY

Protect food supplies from rodent destruction and damage enables you to show the customer large cost savings.

Accomplish this by using Express trays on the exterior and 24/7[®] iQ[®] and T-Rex[®] iQ[®] in the interior. The exterior Express[®] iQ[®] trays provide knowledge of how, where and when rodents are entering. Placing 24/7[®] iQ[®] traps by the entry door let you know exactly where rodents are getting into the building and at what time.

EXPRESS[®] iQ[®]

24/7[®] iQ[®]

PROTECTING THE FOOD CHAIN

Use 24/7[®] iQ[®] traps under the kick-plate of each aisle, making service efficient and eliminating mice from their direct source of food in the store.

Depending on whether you are dealing with rat or mouse activity, place T-Rex[®] iQ[®] traps throughout the building in: aisles, freezers, behind large machines and hard to reach locations.

24/7[®] iQ[®]

T-Rex[®] iQ[®]

Instead of wasting time checking rodent devices with no activity, pest control experts can spend their time solving problems.
